

To our customers of the Dräger
Oxylog 2000 *plus* and Oxylog 3000 *plus*

February 2014

Important Safety Notice!!!

Dräger Oxylog 2000 *plus*, part number 5705080
Dräger Oxylog 3000 *plus*, part number 5704833

Error message *Poti unplugged*

Dear Madam/Sir,

Within the framework of our quality checks during production, we have noticed increasing numbers of devices displaying the error message *Poti unplugged*.

Our investigation has revealed that a limited batch of control panel PCBs – onto which the potentiometers for setting the ventilation parameters are soldered – is faulty. This can result in the contact to the respective potentiometer being interrupted. The device then discontinues ventilation, gives an audible alarm and displays the error message *Poti unplugged*. Despite our extensive quality control testing, part of the batch in question was shipped in September 2013.

If this error occurs, the user must immediately commence ventilation using an independent ventilator (manual ventilation bag) as specified in the Instructions for Use.

It is devices of the type Oxylog 2000 *plus* (part number 5705080) and Oxylog 3000 *plus* (part number 5704833) with the serial numbers listed on page 3 of this letter that are affected. Both the part number and the serial number can be found on the typeplate to the rear of the device.
